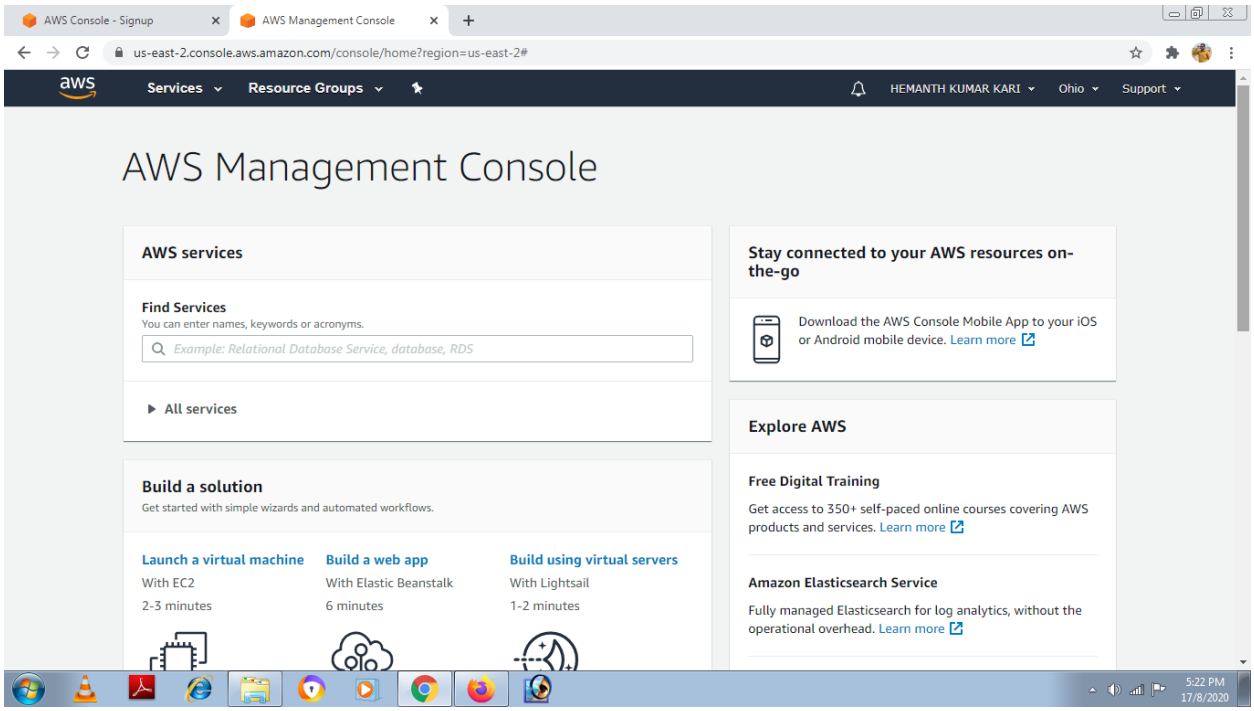
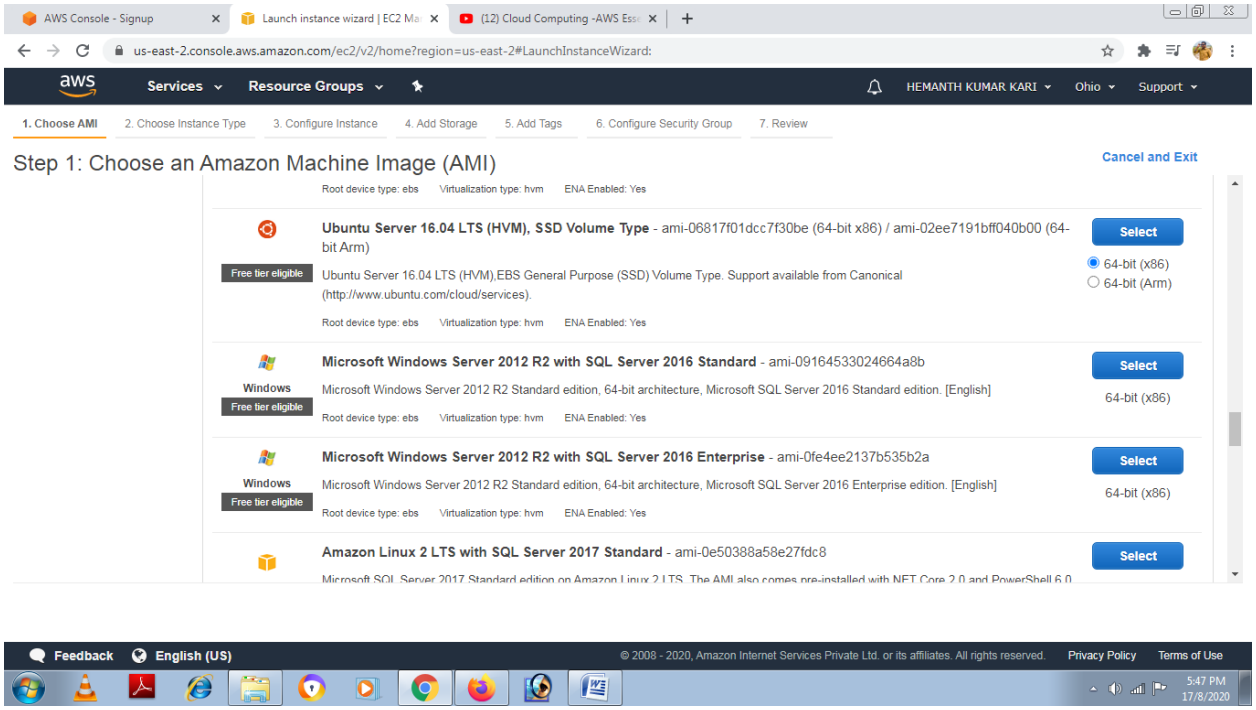
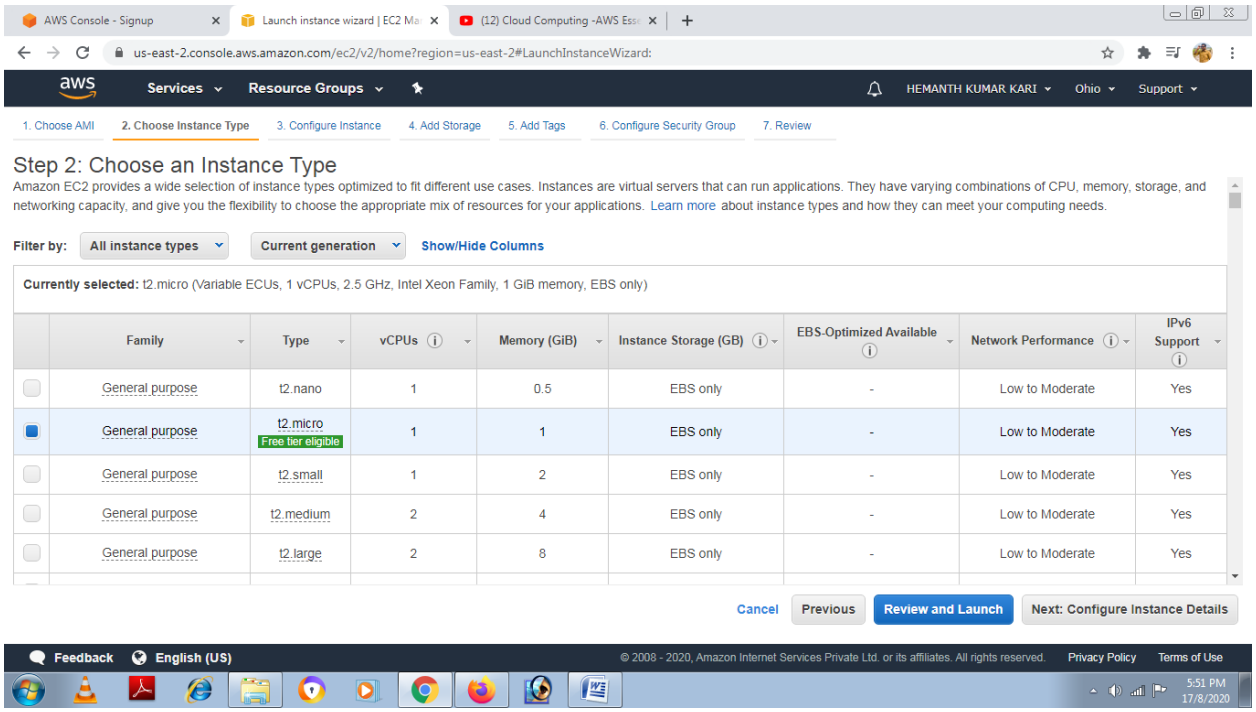
Lab 1-With Windows instance



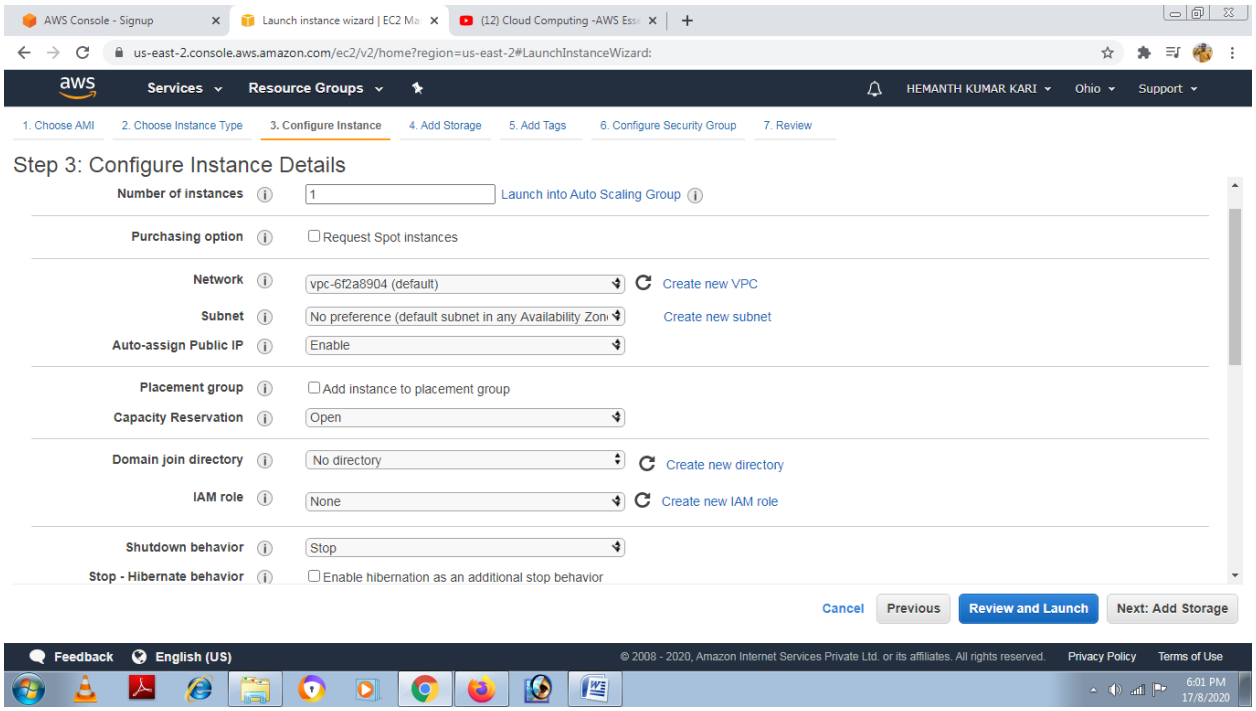
Step 1: Aws Management Console.

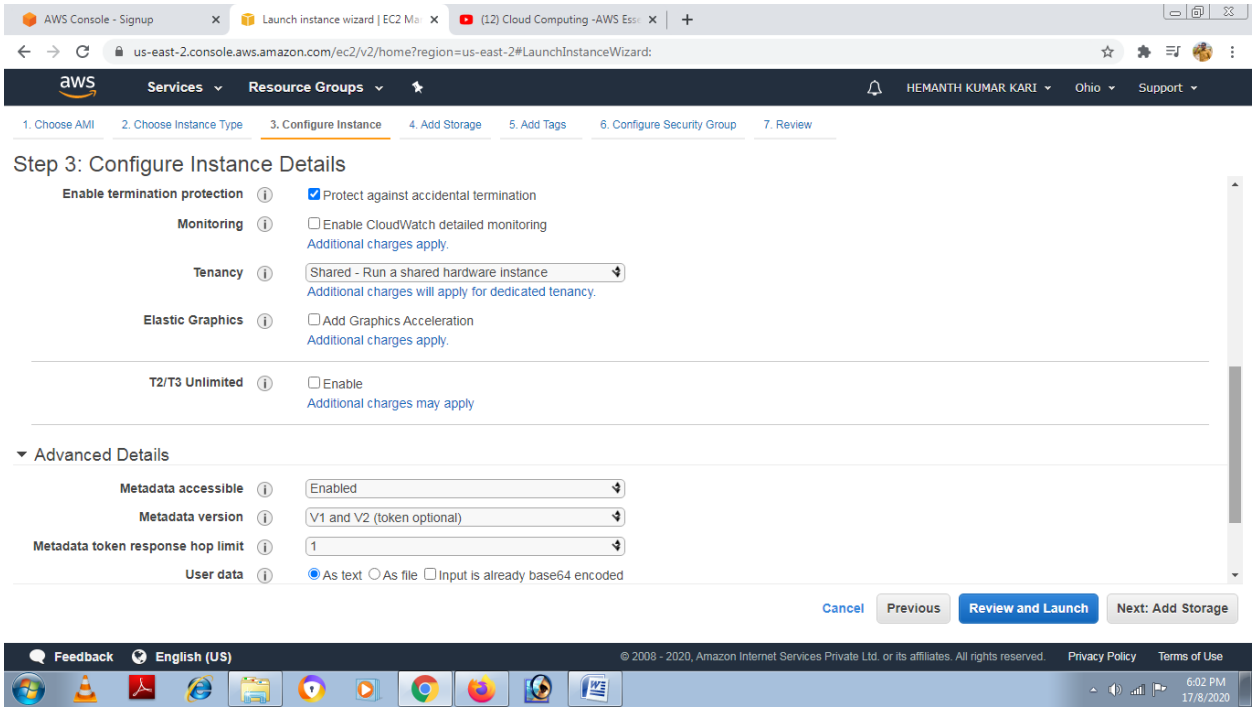


Step2: Click on Instances and Select a AMI(Amazon Machine Image(you can select any version of AMI)).

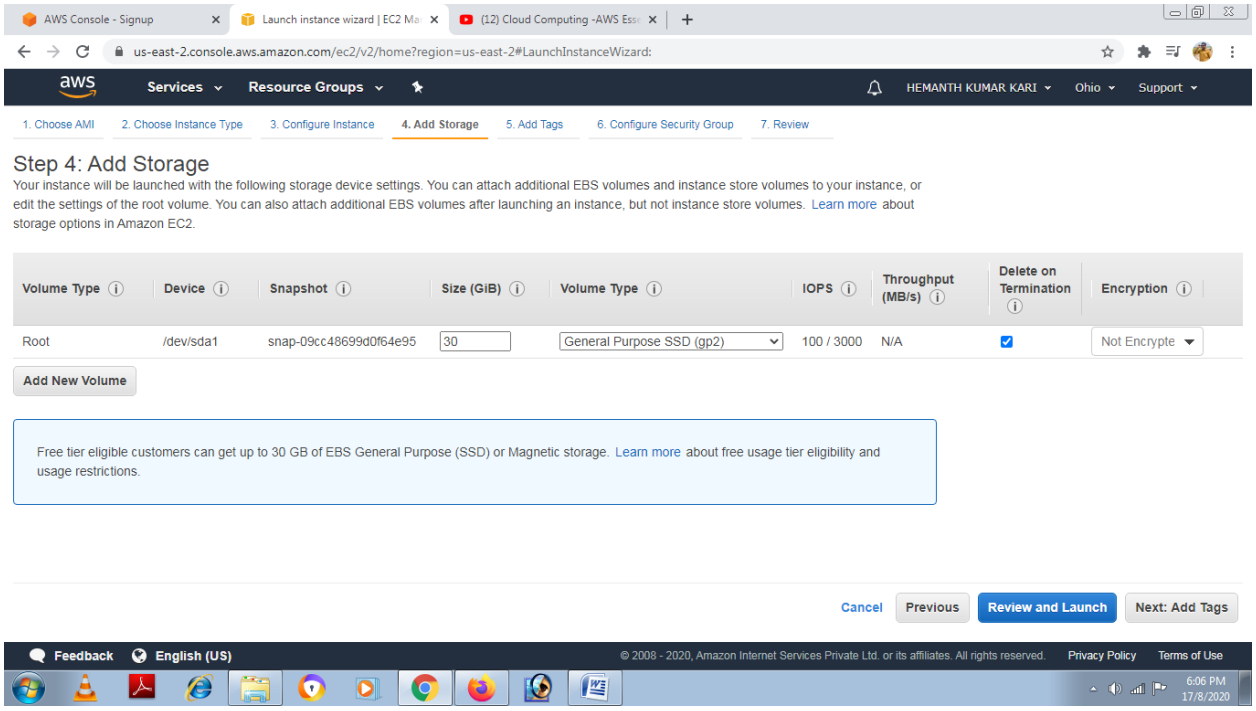


Step3: Select one AMI and it should be a free tier eligible

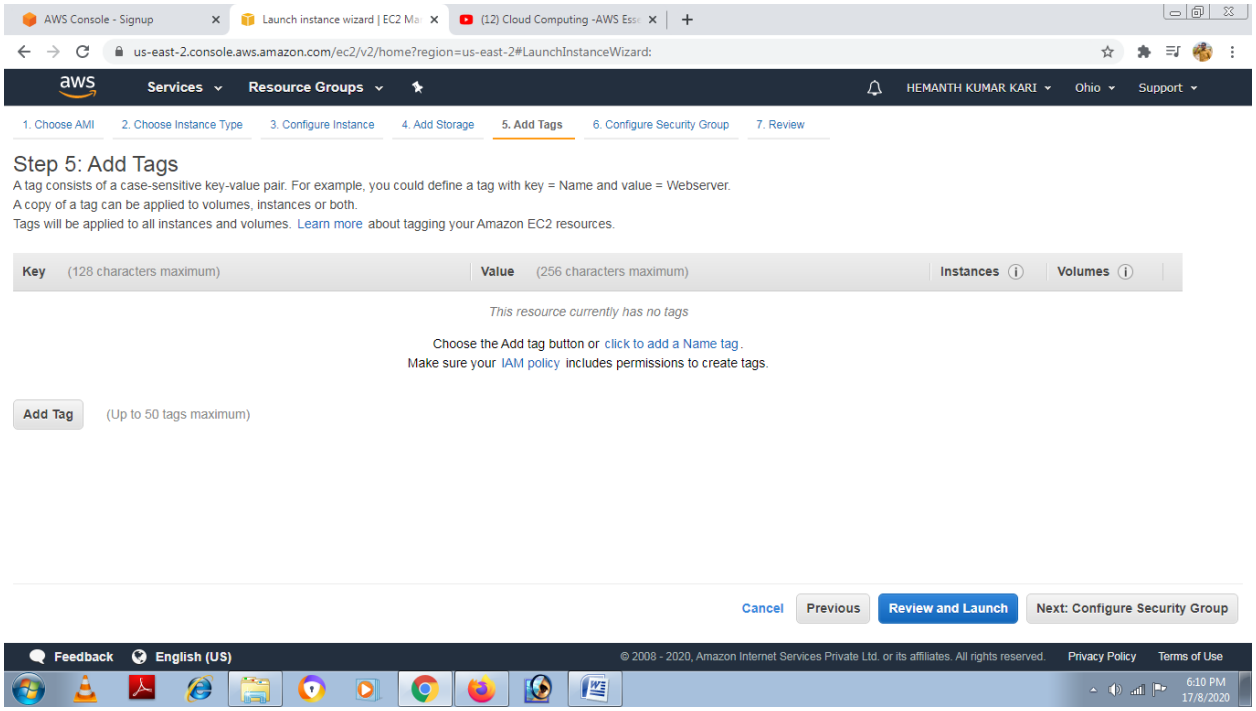




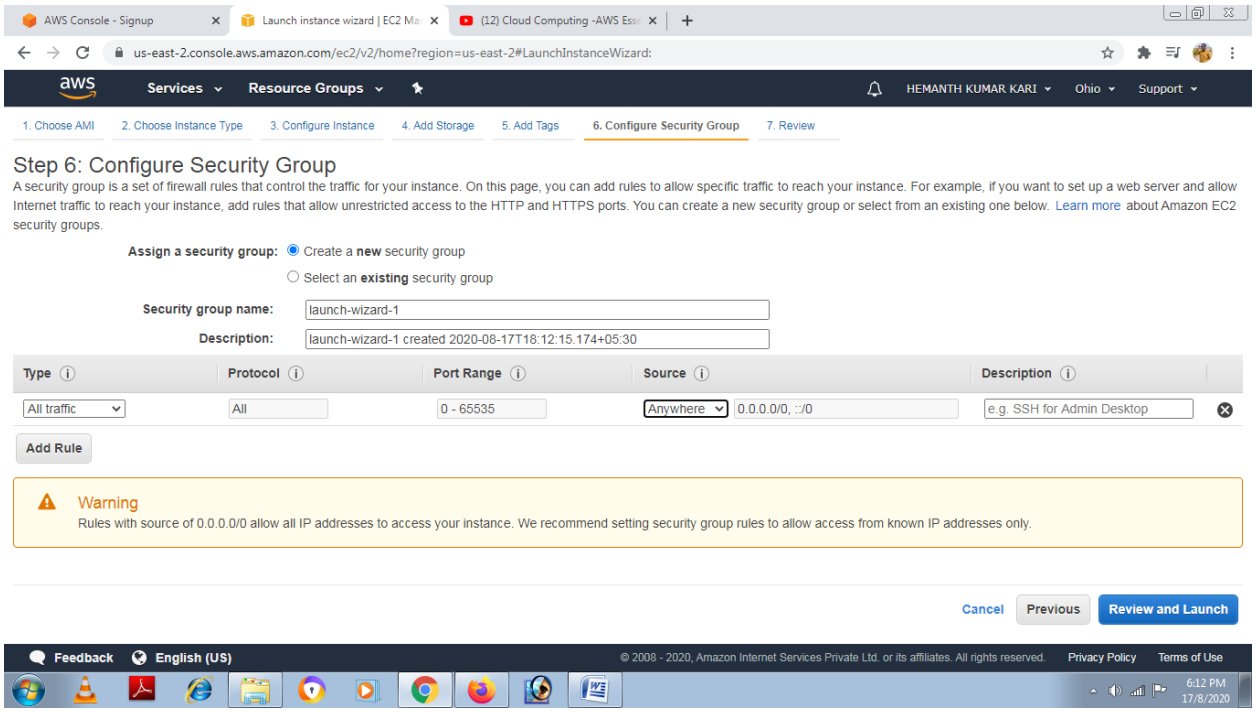
Step4: Modify the configure details and go for next step.



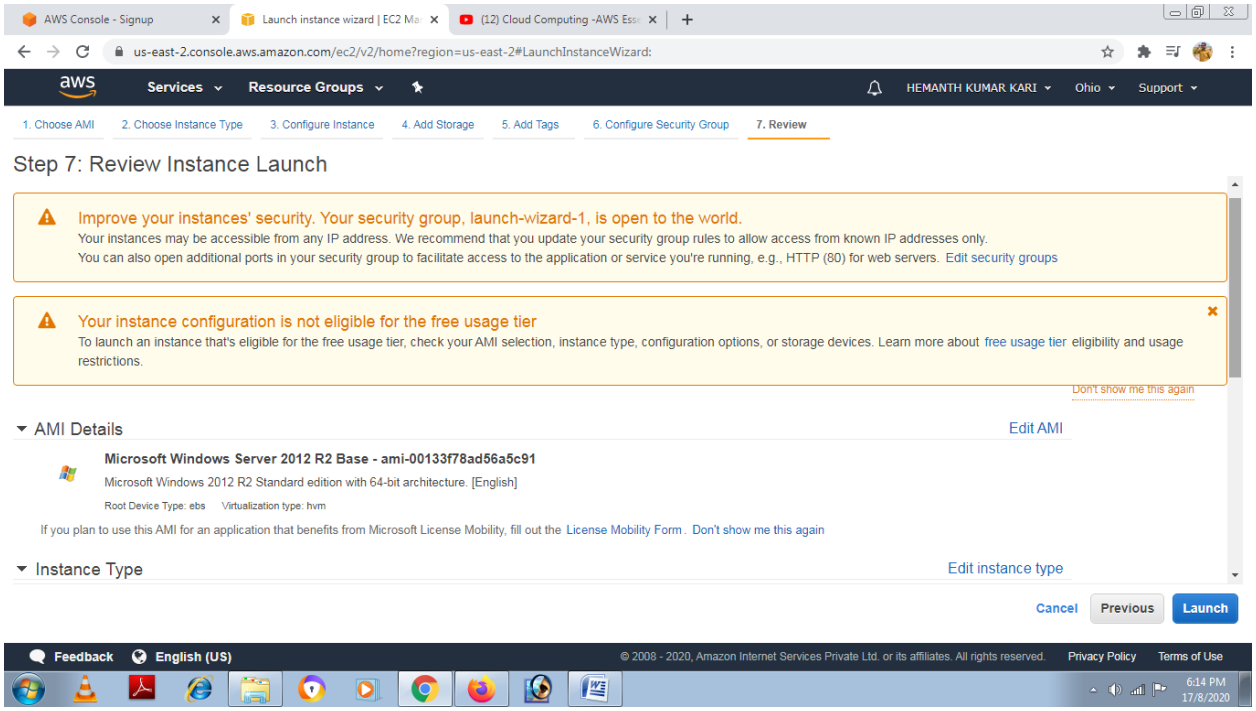
Step 5: Add Storage.

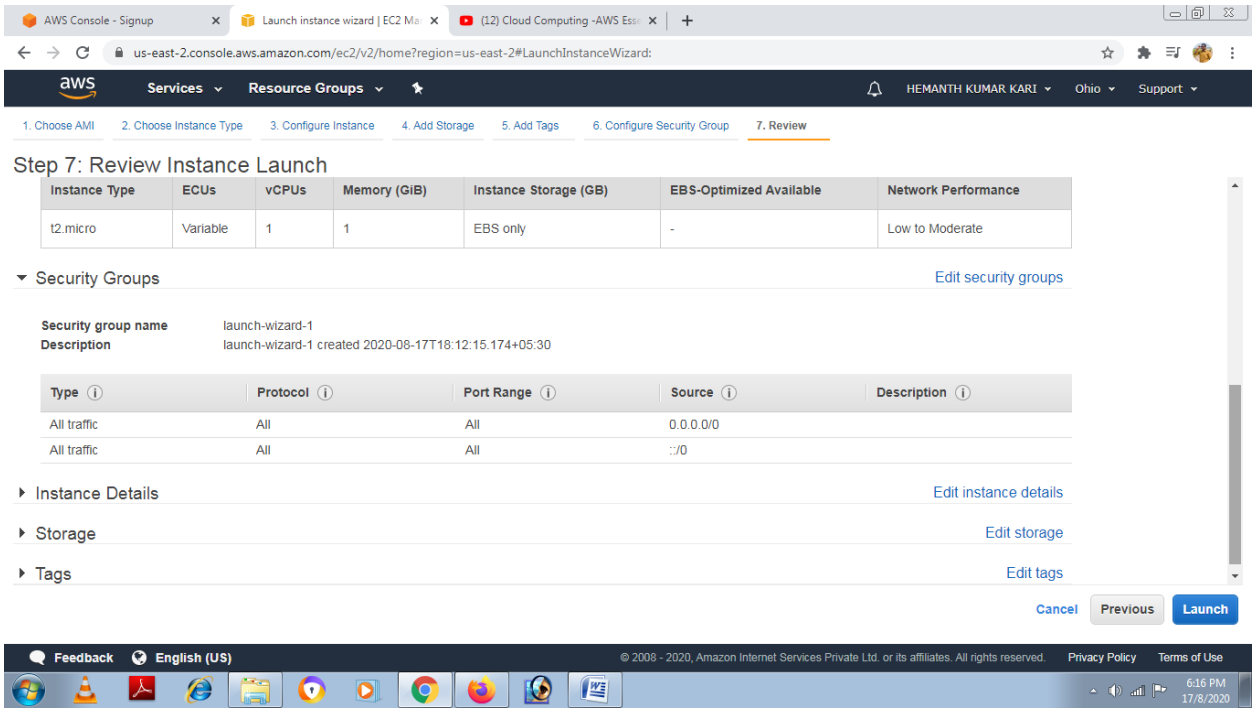


Step 6: Add tags and then go for security step.

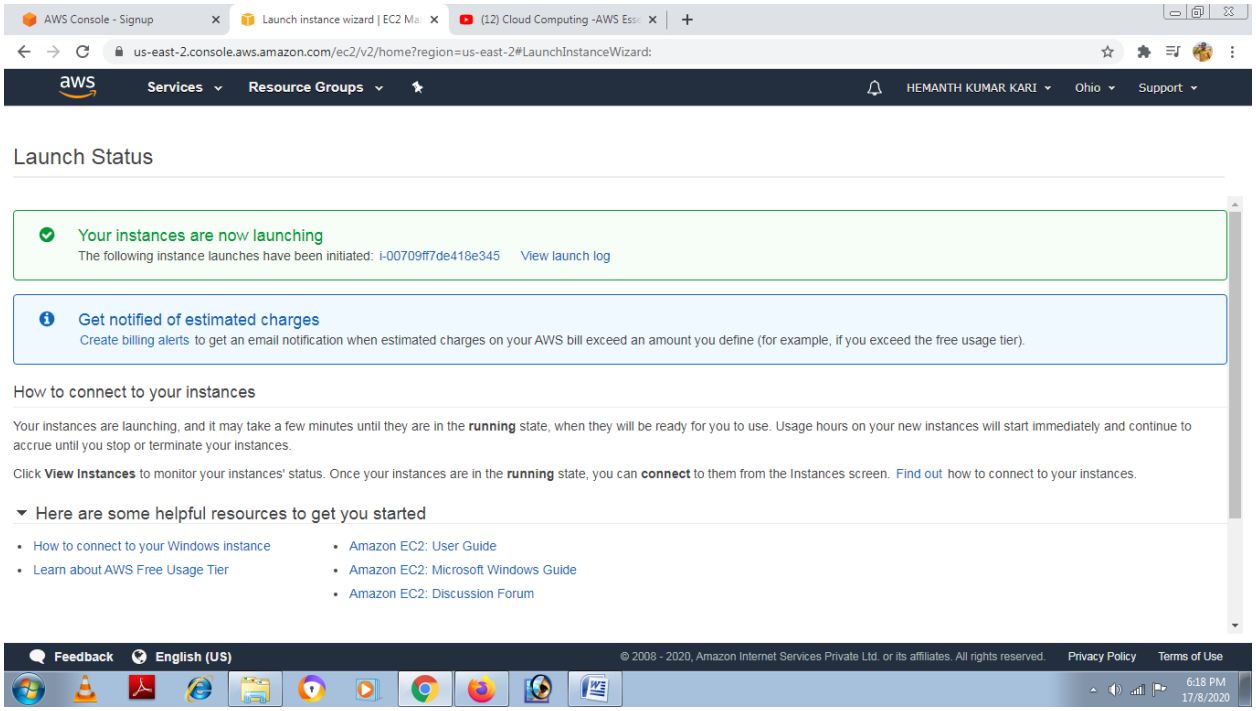


Step 7: Configure Security Group and then review & launch.

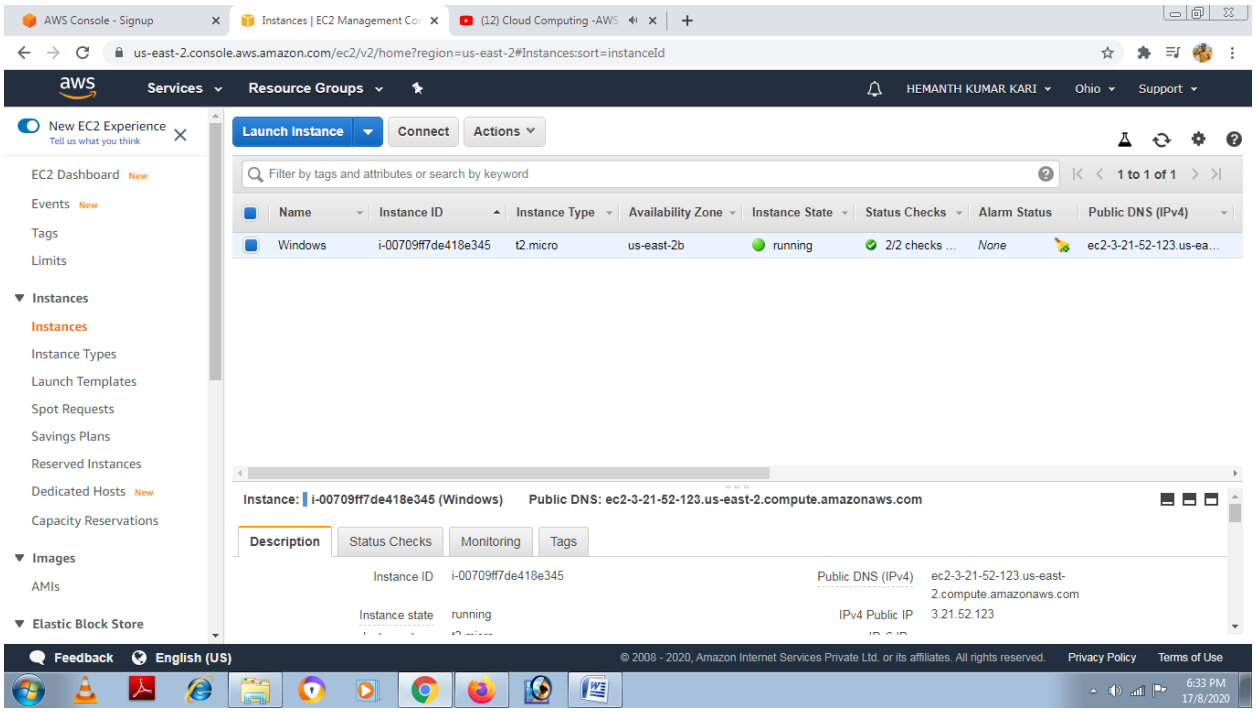




Step 8: Review Instance Launch and then launch the instance.



This is the status launch of instance I selected.



Successfully launched the Windows instance.
